

Goods Platform Lifts

Efficiency and Compliance

Efficiency and Compliance: Discover the Benefits of Goods Only Platform Lifts

Streamline operations and improve productivity.

Discover a new level of efficiency and compliance with our state-of-the-art goods-only platform lifts. As businesses strive to streamline operations and improve productivity, our lifts offer a tailored solution for the safe and efficient transportation of goods. With a focus on performance, safety, and compliance, we empower your business to thrive in the ever-evolving marketplace.

Versatile Applications

Our goods-only lifts are suitable for a wide range of applications across various industries. From warehouses and manufacturing facilities to retail stores and distribution centres, our lifts offer versatile solutions for vertical transportation needs. Experience the flexibility and adaptability that our lifts bring to your specific business environment.

Customised Solutions

We understand that each business has unique requirements. That's why our goods lifts can be customised to suit your specific needs. Whether it's the size, capacity, or specific features, we offer tailored solutions that align with your operational demands. Benefit from a lift that seamlessly integrates into your workflow, providing optimal efficiency and convenience.

Safety and Reliability

Safety is our top priority. Our goods-only lifts are equipped with advanced safety features to ensure secure transportation of goods. Robust construction, reliable mechanisms, and comprehensive safety systems guarantee the protection of both your goods and personnel. Trust in the reliability of our lifts, minimising downtime and maximising operational efficiency.

Compliance with Standards

Our goods-only lifts strictly adhere to the requirements of the Machinery Directive and relevant EN81 regulations. This ensures the highest safety standards are met, protecting both operators and goods. By choosing our compliant lifts, you demonstrate your commitment to workplace safety and ensure compliance with relevant regulations.

Expert Installation and Support

With our experienced team of professionals, you can count on expert installation and ongoing support. From the initial assessment and design phase to installation and after-sales service, we are committed to providing a seamless experience. Our dedicated support team is always available to address your queries and ensure smooth and trouble-free operation of your goods-only lift.

Enhanced Productivity

Our goods-only lifts are specifically designed to streamline your logistics and materials handling processes. With their robust construction and efficient operation, these lifts significantly enhance productivity by facilitating quick and effortless movement of goods. Enjoy seamless operations, reduced manual handling and improved efficiency, leading to increased output and cost savings.

Types & Applications

➤ **Goods Only Platform Lifts:** These lifts are designed specifically for the vertical transportation of goods, such as pallets, crates, and heavy equipment. They provide a robust and reliable solution for efficient goods handling within warehouses, distribution centres and industrial facilities. These lifts are quick and easy to install with little or no builders works required, and carrying capacities up to 2000kg from our standard range - or even higher from our bespoke options.

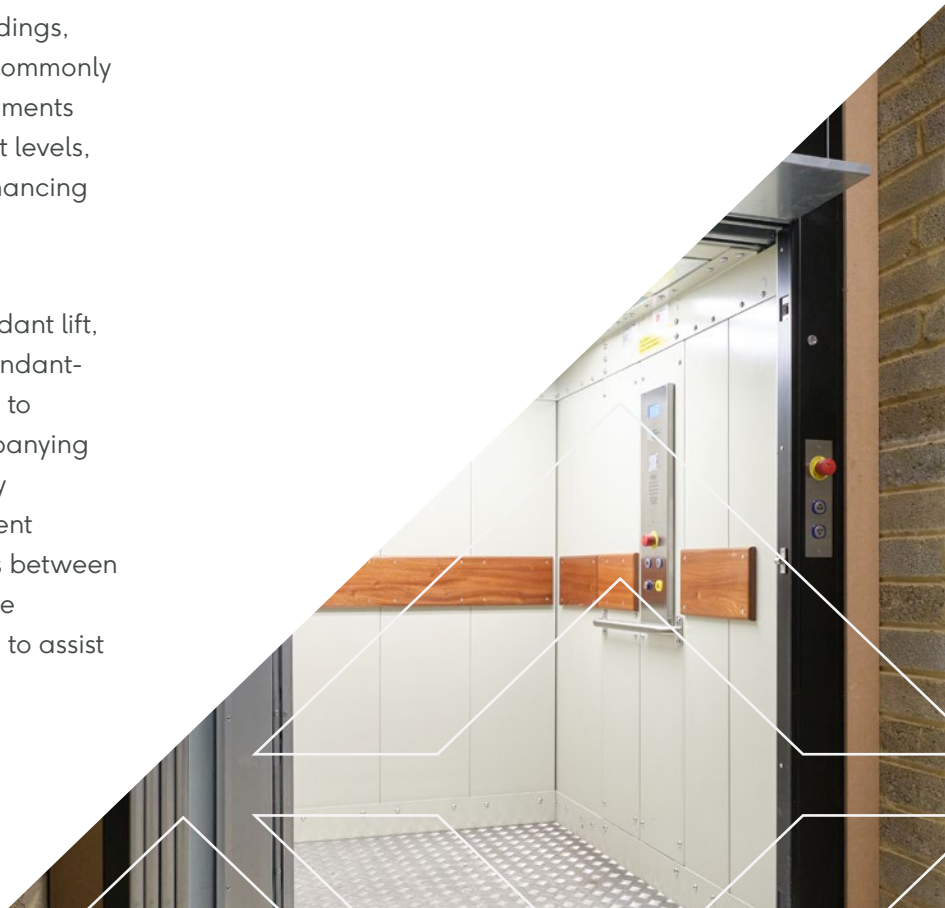

➤ **Scissor Lifts:** A scissor lift is a type of hydraulic lifting platform that operates on a scissor mechanism, consisting of linked, folding supports. This mechanism enables the lift to extend and retract vertically, moving heavy loads between split levels, useful in many environments such as loading bays.

➤ **Dumbwaiter Lifts:** Dumbwaiter lifts are compact, small-sized lifts primarily used for transporting goods in residential buildings, restaurants, and hospitals. They are commonly employed to move food, dishes, documents or medical supplies between different levels, minimising manual handling and enhancing efficiency.

➤ **Goods + Attendant:** A goods + attendant lift, also known as a service lift or an attendant-operated lift, is a type of lift designed to transport both goods and an accompanying operator or attendant. It is specifically designed to provide a safe and efficient method of moving goods or materials between different levels within a building, while allowing for the presence of a person to assist in loading and unloading.

➤ **Dock Leveller:** A dock leveller is a mechanical device used to bridge the height difference between a loading dock and a truck or trailer bed. It provides a smooth and safe transition for forklifts, pallet jacks, and other material handling equipment to move goods between the dock and the vehicle.

➤ **Trolley Lift:** A trolley lift is a small freight lift designed to transport goods or materials between different levels within a building. It typically consists of a small vertical shaft with a movable platform or compartment that can be loaded and unloaded at each floor.

Why Choose a Goods Only Platform Over a Conventional Lift?

- **Space Efficiency:** Goods-only platform lifts are designed to maximise space efficiency. They have a smaller footprint compared to conventional lifts, allowing for easier integration into existing building layouts. This is particularly beneficial in areas with limited space or where retrofitting a conventional lift may not be practical.
- **Safety and Accessibility:** Goods-only platform lifts contribute to accessibility within a building, making it easier to transport goods between different levels. They eliminate the need for manual handling of heavy items on staircases or through other inaccessible routes, reducing the risk of injuries and enhancing overall operational efficiency.
- **Durability and Reliability:** Goods-only platform lifts are built to withstand heavy-duty use and are constructed with robust materials to ensure durability. They are engineered to handle frequent and repetitive load transportation, providing reliable performance over their lifespan.
- **Cost-effectiveness:** Goods-only platform lifts are often more cost-effective than conventional lifts. Since they are designed for the sole purpose of transporting goods, they usually have simpler mechanisms and fewer complex features, resulting in lower manufacturing and installation costs.
- **Easy Installation:** Goods-only platform lifts are typically easier to install compared to conventional lifts. They often require less structural modification to the building and can be installed in a shorter timeframe, resulting in reduced disruption to the premises during installation.
- **Flexibility:** Goods-only platform lifts offer greater flexibility in terms of size, load capacity, and customisation options. They can be tailored to accommodate various load sizes, shapes, and weights, making them suitable for a wide range of goods transportation needs.
- **Compliance with Industry Standards:** Goods-only platform lifts are manufactured in accordance with the relevant safety standards and regulations set by the Machinery Directive and relevant EN81 requirements. This ensures that they meet strict safety requirements and provide a reliable and secure means of transporting goods.

It's important to note that while goods-only platform lifts have distinct advantages for goods transportation, conventional lifts fall under different regulations and are designed to cater to the transportation needs of both goods and passengers. The choice between these two types of lifts depends on the specific requirements and usage scenarios of the building or facility. Speak to our team to find out more.
